

Complete Contrast Allergy Premedication Kit

Helping patients take the right medication at the right time, every time.

Compliance

Decades of research supports improved patient adherence with similar compliance packaging.

Randomized clinical trials also demonstrate patient preference of blister packs to traditional pill bottles.

Convenience

Complete contrast allergy premedication regimen in an easy to use kit for patients at high risk for allergic reactions during administration of IV contrast.

Avoids confusion at the pharmacy with prescription prednisone and OTC diphenhydramine.

Safety

Poor medication adherence has been shown to cost the US Healthcare System \$300 Billion and contribute to 125,000 deaths annually.

Poor medication compliance is felt to be responsible for 10-25% of hospital admissions.

Our Product

The Contrast Allergy PreMed Pack uses the American College of Radiology (ACR) recommended premedication regimen. Our goal is improve compliance, patient satisfaction and safety all the while keeping the pack affordable for the patient. Currently, the best way to make sure our product is available to your patient is through your local hospital pharmacy or imaging center. We have encouraged large medical centers to adopt our product as a patient centered solution to a common problem and part of national trends towards Quality Improvement in Radiology. Please call 888.899.0023 to order or use link below to find out more.
